Education

Missouri University of Science & Technology

Dec 2028

B.S. Computer Science

Heritage Christian Academy High School

May 2025

H.S. Diploma

Experience

Mars Rover Design Team - Software Team Member

Aug 2025 - Present

Missouri University of Science & Technology

- Implemented closed loop velocity speed control using custom written PID algorithm to integrate motor drive boards with autonomous navigation stacks.
- Engineered a dynamic variable drive speed system using IMU and LiDAR telemetry to detect abnormal rover positioning, automatically throttling velocity to prevent catastrophic failure.
- Designed LiDAR path planning and image recognition to avoid abnormal or untraversable terrain.
- Collaborated with multidisciplinary engineering sub-teams to build new drive systems and integrate real-time sensor feedback into autonomous planning pipelines.
- Adapting previous year's tank drive system software to newly designed swerve drive system.
- Presented Preliminary Design Review (PDR) and Critical Design Review (CDR) to full team.

Athletics Media Assistant

Aug 2025 - Present

Missouri University of Science & Technology Athletics

- Capture professional sports and event photography and dynamic video coverage for NCAA collegiate athletic events working under high pressure, fast paced game environments.
- Coordinate with Athletics Communications Director, teach coaching staff, athletes, and media personnel to satisfy department needs and deadlines.
- Utilized self developed web portfolio to distribute media across teams and staff members. See Photography Portfolio Web Application.

Personal Projects

Automated Image Processor for Instagram

Python, Pillow (PIL), Tkinter

- Engineered a Python image processing tool that automates image reframing and padding to fit required template sizes without compromising quality.
- Implemented a batch processing workflow using PIL to dramatically increase department turn around.
- Designed an intuitive graphical interface for users to select directories, sort images, and export web compatible images seamlessly.

Photography Portfolio Web Application

HTML, PHP, CSS, JavaScript

- Developed and deployed a responsive photography portfolio website showcasing athletics, portraits, and event media across all platforms.
- Optimized image asset delivery and implemented loading techniques to maintain fast page load speeds and smooth gallery rendering.

Skills

Technical: Java, Python, C/C++, HTML, CSS, PHP, JavaScript, Fusion 360, Linux, Version Control, Adobe Products

Interpersonal: Project Management, Leadership, Communication, Public Speaking, Teamwork, Organization
